

Project Design Phase

Problem – Solution Fit Template

Date	24 July 2026
Team ID	Individual / Solo Project
Project Name	Software Installation Request Automation using ServiceNow Service Catalog
Student	Busa Bhanu Prasad
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why.

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ Understand the existing situation in order to improve it for your target group.

Canvas: Software Installation Request Automation

1. Customer Segment(s) <i>Who is your customer?</i> • Employees requesting licensed software for their work • Managers who approve software purchase requests • IT Administrators who fulfill requests and manage licenses	6. Customer Constraints <i>What constraints prevent customers from taking action?</i> • No self-service portal — requests rely on email/chat • Limited visibility into approval and fulfillment status • License counts tracked manually in spreadsheets • Time and budget limits for building new integrations	5. Available Solutions <i>What solutions are available today?</i> • Manual email requests to the IT helpdesk • Verbal or chat requests to a manager or IT staff • Spreadsheet-based license tracking • Cons: slow, error-prone, no audit trail or SLA
2. Jobs-to-be-Done / Problems <i>Which jobs/problems do you address?</i> • Employee: get licensed software installed quickly • Manager: review and approve requests with full context • IT: verify license availability and deploy correctly	9. Problem Root Cause <i>What is the real reason this problem exists?</i> • No standardized system links request, approval, licensing, and fulfillment • Software requests are handled ad-hoc through email with no workflow	7. Behaviour <i>What does the customer do to solve the problem today?</i> • Emails or messages IT directly to request software • Manager approves informally via email reply • IT manually installs software and updates a spreadsheet
3. Triggers <i>What triggers customers to act?</i> • Starting a new project that requires a specific tool • Onboarding a new employee • An existing license nearing expiry	10. Your Solution <i>Your current solution</i> • ServiceNow Service Catalog item for self-service requests • Flow Designer-driven tiered approval routing • SAM integration for automatic license allocation • IntegrationHub deployment via Intune/SCCM • Automatic status tracking and notifications	8. Channels of Behaviour <i>8.1 Online / 8.2 Offline</i> • Online: Service Portal, email notifications, mobile app • Offline: in-person conversations with manager or IT, helpdesk walk-ins
4. Emotions: Before / After <i>How do customers feel before/after?</i> • Before: frustrated, uncertain, blocked waiting on IT		

• After: confident, informed, and productive with a transparent, fast process
