

Ideation Phase

Define the Problem Statements

Date	24 July 2026
Team ID	Individual / Solo Project
Project Name	Software Installation Request Automation using ServiceNow Service Catalog
Student	Busa Bhanu Prasad
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Applied to This Project

The problem statements below capture the perspectives of the three main stakeholders affected by the current manual, email-based software installation process: the Employee requesting software, the Approving Manager, and the IT Administrator who fulfills requests.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	an employee who needs a licensed software tool to do my job	request and get the software installed on my laptop quickly	I have to email IT and wait days without knowing the status	there is no standard system to submit, track, or approve software requests	frustrated and unproductive
PS-2	a manager who approves software purchase requests for my team	review and approve or reject requests quickly and with full context	approvals happen informally over chat/email with no record or SLA	there is no structured, auditable approval workflow tied to the request	uncertain and accountable without visibility
PS-3	an IT administrator who fulfills and tracks software installations	verify license availability and deploy software correctly the first time	license counts are tracked manually in spreadsheets prone to errors	Software Asset Management is not integrated with the request process	overworked and at risk of compliance issues

Summary

Across all three perspectives, the common root cause is the absence of a standardized, automated system for requesting, approving, and fulfilling software installations. This validates the need for a ServiceNow Service Catalog solution that gives employees a self-service request experience, gives managers a clear and auditable approval workflow, and gives IT administrators integrated license tracking and automated deployment.
