

Ideation Phase

Empathize & Discover

Date	24 July 2026
Team ID	Individual / Solo Project
Project Name	Software Installation Request Automation using ServiceNow Service Catalog
Student	Busa Bhanu Prasad
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool that helps teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Applied to This Project: Software Installation Request Automation

Persona: An Employee requesting licensed software through the current manual, email-based process.

Think & Feel

"I hope this doesn't take another week to get approved."	"Why can't I just click a button like ordering something online?"	"I'm worried I'll get blamed for not having the software on time."
--	---	--

Hear

Colleagues complaining about slow IT turnaround times	Manager asking why the requested tool still isn't installed
---	---

See

A long, unanswered email thread with the IT helpdesk	No status tracker or dashboard to check request progress
--	--

Say & Do

Sends follow-up emails and pings IT on chat repeatedly	Asks a colleague to escalate the request informally	Delays project work while waiting for the software
--	---	--

Pain

No visibility into approval or fulfillment status	Delays impact project deadlines and productivity	Uncertainty over whether a license is even available
---	--	--

Gain

A simple self-service catalog request in a few clicks	Real-time status tracking without contacting IT	Faster, predictable turnaround with automated approval and install
---	---	--

Insight Summary

The employee's core pain stems from a lack of visibility and predictability in the software request process. This directly supports the project's goal of building a self-service Service Catalog item with automated approval routing and real-time status tracking, so employees always know where their request stands and receive software faster.
