

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	24 July 2026
Team ID	Individual / Solo Project
Project Name	Software Installation Request Automation
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Software Discovery	Browse the Service Catalog for approved, licensed software Search for software by name or category View license type, cost, and approval requirement for each item
FR-2	Request Submission	Submit a request with business justification Auto-populate employee and device details from the CMDB Receive confirmation once the request is submitted
FR-3	Approval Workflow	Route the request to the employee's manager for approval Approve or reject a request directly within ServiceNow Escalate or delegate approval automatically after a set timeout
FR-4	License & Compliance Management	Check license pool availability before fulfillment Block the request and notify procurement when licenses are depleted Track usage against license entitlements for compliance
FR-5	Fulfillment & Installation	Queue approved, compliant requests for IT fulfillment Remote or silent install for standard pre-approved software Mark the request as fulfilled and update the ticket status
FR-6	Notifications	Send email/portal confirmation on submission, approval, and completion Send reminder notifications for pending approvals
FR-7	Reporting & Asset Tracking	Log installed software in the asset inventory (CMDB) Provide a dashboard of license usage and compliance status Send renewal reminders before license expiration

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Service Catalog item and request form should be simple enough for any employee to submit a request without training or IT assistance.
NFR-2	Security	Access to the catalog item and approval actions should be restricted by role, and all requests, approvals, and license data should be logged for audit.

NFR No.	Non-Functional Requirement	Description
NFR-3	Reliability	The approval routing, license checks, and fulfillment workflow should run consistently without dropped or duplicated requests.
NFR-4	Performance	Catalog search and request submission should respond within a few seconds even during peak usage periods.
NFR-5	Availability	The Service Catalog and request workflow should be available during standard business hours across all supported regions, with minimal planned downtime.
NFR-6	Scalability	The workflow should support a growing number of employees, software titles, and concurrent requests without degrading performance.
